VISION & MISSION

Initiated by the OECD's Global Science Forum, GEM was formed in 2009 as a non-profit foundation in Pavia, Italy, funded through a public-private sponsorship with the vision to create **a world that is resilient to earthquakes**. GEM's mission is to become one of the world's most complete sources of risk resources and a globally accepted standard for seismic risk assessment, whose products are applied in risk management worldwide.

**A world
that is
resilient to
earthquakes**

Leadership

John Schneider
Secretary General

Mauro Dolce - DPC Italy
Governing Board Chairperson

WHO WE ARE

GEM is comprised of collaborators from public, private, academic and non-government organizations worldwide. These partners work together to advance the state-of-the-art for disaster risk reduction by developing data, tools and information for improving our understanding of earthquake hazard and risk globally. (<https://www.globalquakemodel.org/who-we-are>).

WHO WE ARE

GEM At A Glance

GEM works with an international network of experts and regional collaborators to ensure that GEM tools, models and datasets support the creation of earthquake risk reduction strategies that are promoted and utilized by local and international communities. GEM is a unique organization due to its open, collaborative approach, global coverage, and commitment to scientific credibility. GEM is [UNISDR's Damir Čemerin 2018 Awardee](#) for its contribution to earthquake hazard and risk reduction efforts globally.

FRAMEWORK

Core Activities and Principles

GEM builds capacity to assess and manage risk through open, transparent and collaborative seismic risk assessment at local, national, regional and global scales. Using state-of-the-art tools, GEM is committed to share and advocate open, reliable earthquake risk information to support sound disaster risk-reduction planning at various levels.

DEVELOPMENT

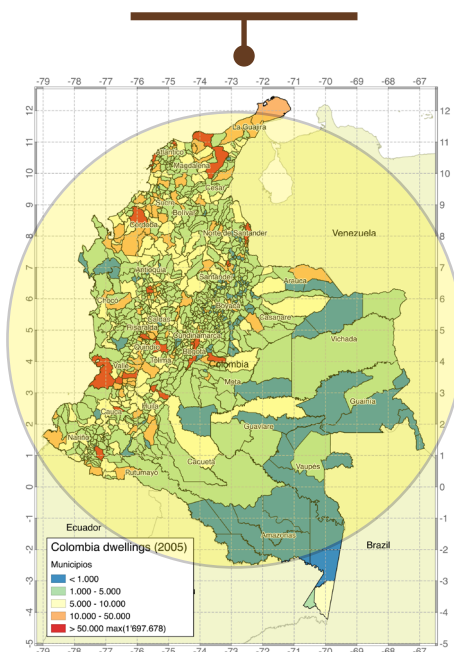

APPLICATION

GEM builds risk assessment capacity across academic, public and private sectors using GEM's open data, tools and models.

An exposure model for Colombia, which can support risk reduction managers in the development of risk reduction strategies.

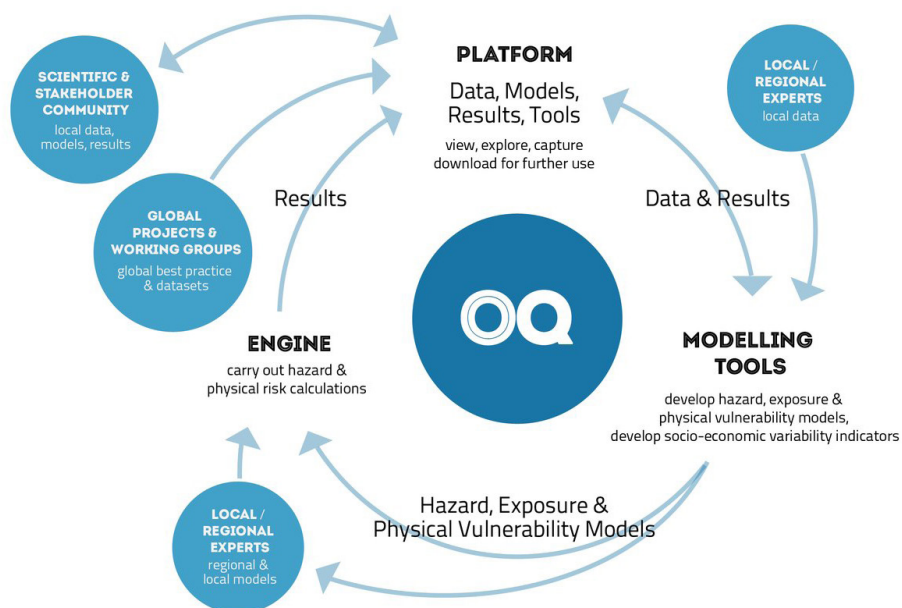

GEM collaborators in Lima, Peru creating a building inventory with GEM's Android and Windows apps. The activity was part of the South America Risk Assessment project in 2015.

OUR WORK

OpenQuake

OpenQuake (OQ) - comprised of the engine, platform, data and tools - caters to a variety of users, from modellers and researchers to emergency planners - OpenQuake is used for a wide range of purposes for disaster risk reduction and management. The OQ engine (<https://github.com/gem/oq-engine/#openquake-engine>) is a free, open-source software collaboratively developed for the assessment of earthquake hazard and risk.

OpenQuake engine

The functionality to analyze hazard and risk at a specific location, city, country or region makes the OpenQuake engine a powerful and dynamic tool for assessing the potential impacts of earthquakes worldwide.

“

OpenQuake is a huge effort from GEM. It is recognized as one of the most advanced tools in the world. Because of its transparent nature, you can trace the outputs of your work giving modellers access to how it works – it's not a 'black box'.

Jack Baker

Stanford University, USA

OpenQuake platform

The OpenQuake engine is complemented by a wide range of data, information and tools that are accessible on the OpenQuake Platform (<https://platform.openquake.org>). The OQ Platform enables the community to freely explore, access, manipulate and visualize GEM datasets, models and tools. The platform also allows users to contribute, share and discuss new findings and results with the GEM community.

users since 2015 from
3 300 cities

OUR WORK

Collaborative Projects

GEM successfully implemented risk assessment projects with regional, national and local collaborators covering more than **150 countries** in the following areas: Europe, Middle East, South America, Central America, North America, Sub-Saharan Africa, Asia and the Pacific. South America Risk Assessment (SARA)

■ Period: 2013-2015 ■ Countries: Argentina, Bolivia, Chile, Colombia, Ecuador, Peru and Venezuela

Description: The objective of the project was to develop an open and uniform seismic hazard model covering the entire continent, and seismic risk profiles for the Andean countries.

Funding partner: Swiss Re Foundation

Collaborators: Geological groups & associations, universities, scientists, engineers, international agencies, municipalities and government agencies

Sub-Saharan Africa Hazard and Risk Assessment (SSAHARA)

■ Period: 2014-2016 ■ Countries: Burundi, Ethiopia, Kenya, Malawi, Mozambique, Rwanda, Tanzania, Uganda

Description: GEM led a program in East Sub-Saharan Africa to develop a uniform and open earthquake hazard and risk model for this region.

Funding partner: United States Agency for International Development (USAID)

Collaborators: African Union, AfricaArray FEPR – Ethiopia, University of Pennsylvania, Addis Ababa City Government, UNDP Regional Office, international agencies, municipalities and government agencies

Assessing and Mitigating Earthquake Risk in the Caribbean and Central America (CCARA)

■ Period: 2016-2018 ■ Central America and the Caribbean (excluding Cuba)

Description: GEM developed the capacity in the region for earthquake risk assessment using open tools and resources to bridge the gap between risk assessment and disaster risk reduction.

Funding partner: United States Agency for International Development (USAID)

Collaborators: Municipality of San José (Costa Rica), National Commission of Emergencies (CNE), University of Costa Rica (UCR) - Laboratorio Nacional de Materiales y Estructuras (LANAMME), INETER, ONESVIE, ODPEM, BRGM, Bureau des Mines, VT, Geologica UPR Mayaguez, UNI, SRC and UMG

Assessing and Mitigating Earthquake Risk in the Caribbean and Central America final workshop in Santo Domingo, Dominican Republic (2018)

South America Risk Assessment training in Lima, Peru (2015)

Sub-Saharan Africa Hazard and Risk Assessment conference in Addis Ababa, Ethiopia (2014)

OUR WORK

Key Projects - 2015 and Beyond

GEM collaborates with its partners and stakeholders to build the foundation for well-informed disaster risk management through projects that provide technical support and training on the use and application of GEM's tools and methodologies.

Below is a list of GEM's most recent projects implemented in various parts of the world.

Country	End year	Title	Funder	Partners
Global	2021	Modelling Exposure Through Earth Observation Routines (METEOR)	UK Space Agency	BGS, HOT, ImageCat, NSET, DMD Tanzania
Europe	2020	Seismology and Earthquake Engineering Research Infrastructure Alliance for Europe (SERA)	EUCENTRE	EUCENTRE
USA	2019	Monitoring of earthquake risk of buildings using Safehub low cost sensors	GEM, Safehub	Safehub
Global	2019	Collaborative Risk Assessment for Volcanoes and Earthquakes (CRAVE)	USAID	BGS, EOS, Univ. of Edinburgh, VDAP-USGS, SGC, PhiVolcs, Badan Geologi
Canada	2019	A new earthquake risk model for Canada	Aon-Benfield	Canadian Geological Survey, Impact Forecasting
Central Asia, Global	2018	Earthquake Model for Central Asia (EMCA); Testing & Evaluation Facility	GFZ Potsdam/GEM	GFZ Potsdam
Middle East and Asia	2018	Assistance with regional models for Middle East and Asia	SER Switzerland/GEM	ETH Switzerland
New Zealand	2018	New Zealand earthquake risk model and review for Oceania	GNS New Zealand/GEM	GNS New Zealand
Australia	2018	Modelling critical infrastructure earthquake risk in Perth, Australia	Geoscience Australia/GEM	Geoscience Australia, Western Power, Main Roads, Water Corporation (Australia)
Philippines	2018	Developing slip rates on faults in the Philippines	Taiwan Earthquake Model (TEM)/GEM	TEM, Phivolcs (Philippines)
Global	2018	GFDRR-DFID – Challenge Funds	GFDRR-DFID	HOT, ImageCat, BGS, UCL, CIMA, Norwegian Geotechnical Institute
Colombia	2018	National seismic hazard model for Colombia	Colombian Geological Survey	
Armenia	2018	Improving Post-Disaster Damage Data Collection to inform Decision Making	World Bank	JBA Consulting, CIMA, Geocom Ltd.
Latin America	2018	Hazard, Exposure and Vulnerability Model for Latin America	Suramericana	
Armenia	2017	Probabilistic Seismic Hazard Assessment for the Republic of Armenia	World Bank	AIR Worldwide, GeoRisk
USA	2017	"Beyond Button Pushing": Probabilistic loss assessment in California	California Seismic Safety Commission	UCLA
USA	2017	"Back to Normal": Earthquake Recovery Modelling	California Seismic Safety Commission	
Global	2017	Open Risk Data Dashboard	GFDRR	CIMA, Deltares
Kyrgyzstan Republic	2017	Measuring seismic risk in the Kyrgyz Republic	World Bank-GFDRR	Arup, GFZ Potsdam, CAIAG

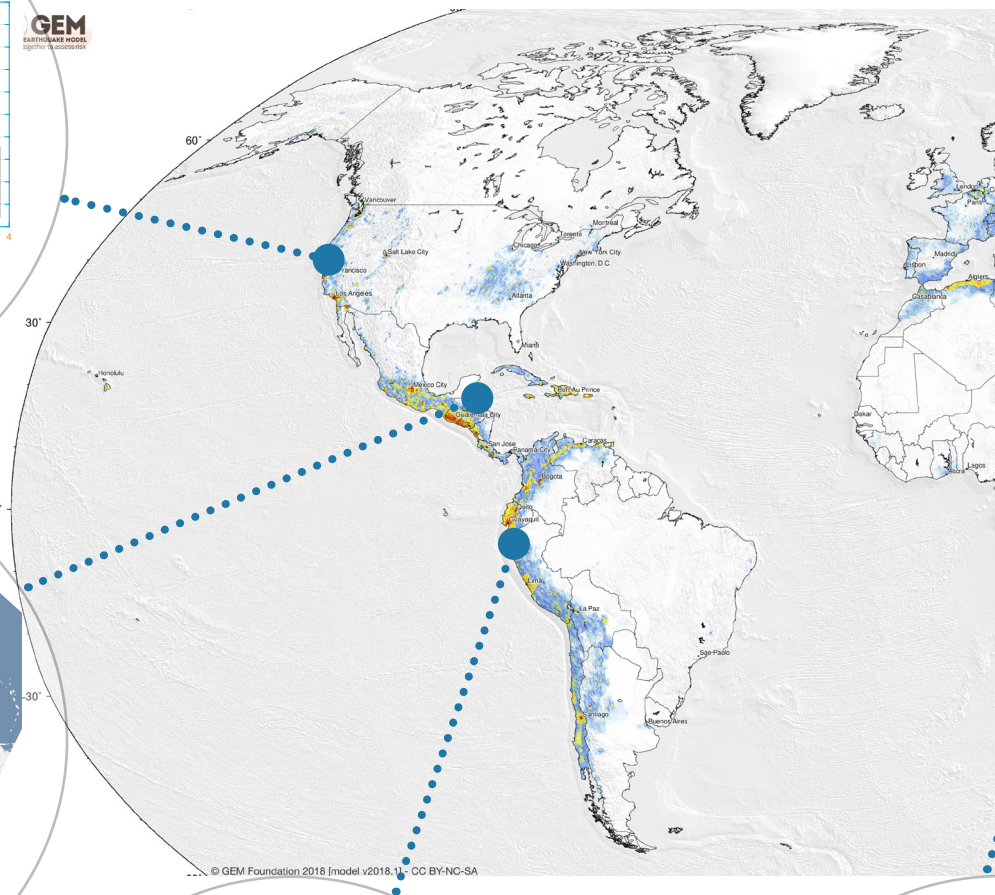

OUR WORK

Global Earthquake Model 2018

The development of the Global Earthquake Hazard and Risk Model was a key priority for GEM under its 2014-2018 Work Program. The objective is to collaboratively develop a complete set of earthquake data and models, and to deliver a comprehensive global assessment of earthquake risk. The current version of the global maps is available at <https://www.globalquakemodel.org/gem>.

Snapshot of the Global Earthquake Model 2018

AREAS COVERED BY GLO

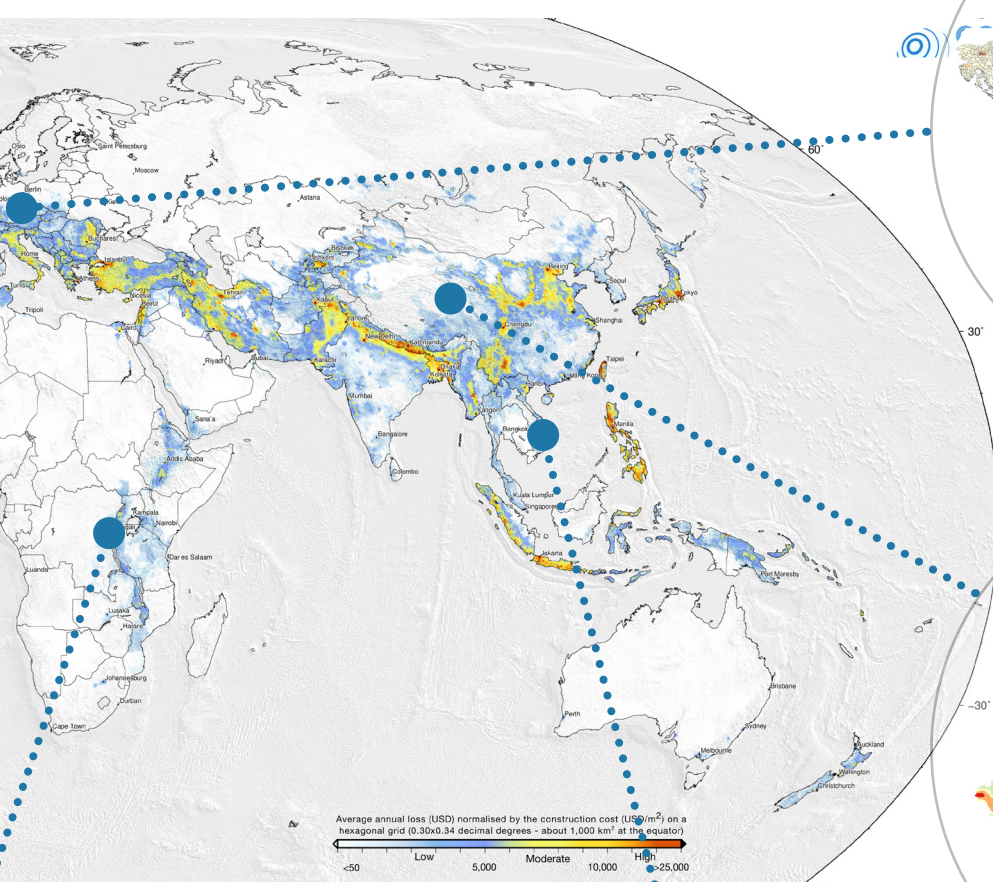

The resulting maps support a wide range of disaster risk management purposes, including (re)insurance pricing and risk transfer, emergency response, recovery, and planning in support of the Sendai Framework for DRR at subnational, national and regional scales.

This initiative was funded by GEM public and private sponsors, and benefitted as well from in-kind contributions and project funding from local, national and government agencies, universities, research institutions, non-government organizations, and international institutions and aid agencies. In 2019, GEM is releasing publicly the underlying hazard and risk models under an open license.

Southeast Asia Risk model developed with regional collaborators

GEM IMPACT

From Knowledge to Application

GEM strives to deliver lasting effects on the ground in the form of reduced earthquake risk and improved earthquake risk management at local and national levels. Scientifically robust, open, transparent and accessible earthquake hazard and risk analysis tools and models combined with collaborative capacity development are key to achieving a world that is resilient to earthquakes.

(<https://www.globalquakemodel.org/gem-impact>)

“

OpenQuake and the ISC-GEM catalog were used in countless presentations at the 2017 Fall AGU meeting in New Orleans. Really fantastic impact on the research community, raising the bar on seismic risk assessment; it was great.

20+ open computational tools and global databases for earthquake hazard, vulnerability and exposure highlighted by the **OpenQuake (OQ)** analysis engine.

“

In ARUP, we really value sharing and collaboration, so for us, GEM is a natural fit. ARUP supports GEM's mission - to share information and promote the use of open tools more widely through collaboration.

Katherine Coates

ARUP, UK

“

GEM has been highly successful in mobilising support and cooperation for achieving its goal of producing a global map of seismic hazard and risk. At the time of writing, no other special interest group has been anything like as successful in producing global hazard and risk maps.

Edmund Booth

The Institution of Structural Engineers

Delivery Mechanisms

Capacity development through OpenQuake tools training, technical support and assistance

550+ trained in seismic risk assessment using OpenQuake in **90+** countries since 2014

Local, national, regional and global seismic risk projects implementation

30+ local, national, regional and global seismic risk assessment projects covering **150+** countries

Data and information sharing through the OpenQuake web platform and GEM website

70K+ website and platform users from **180+** countries since 2015

“ We are particularly impressed by GEM’s collaborative, interactive approach in working with its stakeholders, and are proud to support GEM in their goal of worldwide earthquake resilience.

IMPACT

Immediate Beneficiaries

“

GEM has successfully developed a 21st century seismic risk assessment software – OpenQuake, and addressed the challenges of global database standards for risk assessment.

Kelvin Berryman

GNS Science, New Zealand

Outcomes

Enhanced global understanding of earthquake risk

Improved, standardized and more accessible information for disaster management

Improved information for insurance pricing

Improved skills in scientific seismic risk assessment

“

Our partnership with GEM expanded in-house expertise on earthquake risk and strengthened our overall internal and external risk management processes. We hope to continue this productive collaboration in the years to come.

Jörg Steffensen

Hannover Re - Group Risk Management Modelling

“

GEM’s earthquake resilience performance scorecard methodology has been used in Lalitpur as inputs for the building code process. We are keen to move forward and to further use the scorecard method in the future.

Surya Shrestha

National Society for Earthquake Technology, Nepal

“

GEM is a groundbreaking initiative. From the scientific perspective, I am impressed with the extent and level of development of the tools such as OpenQuake.

Rosa Sobradelo

Willis Towers Watson, UK

FUTURE WORK

GEM will continue to focus on the development of models and tools for earthquake risk assessment, and on their application at global, regional, national and local levels. Key activities will include improving the OpenQuake engine and its supporting tools and databases, and strengthening our capacity building and user support program. GEM will also extend its activities to address more complex risk issues, and will collaborate more extensively with other communities to make OpenQuake tools and models useful for multi-hazard risk assessment. (<https://www.globalquakemodel.org/future-work>)

Programs

Planned Activities & Schedule of Deliverables

Continuing the development of core products and capability

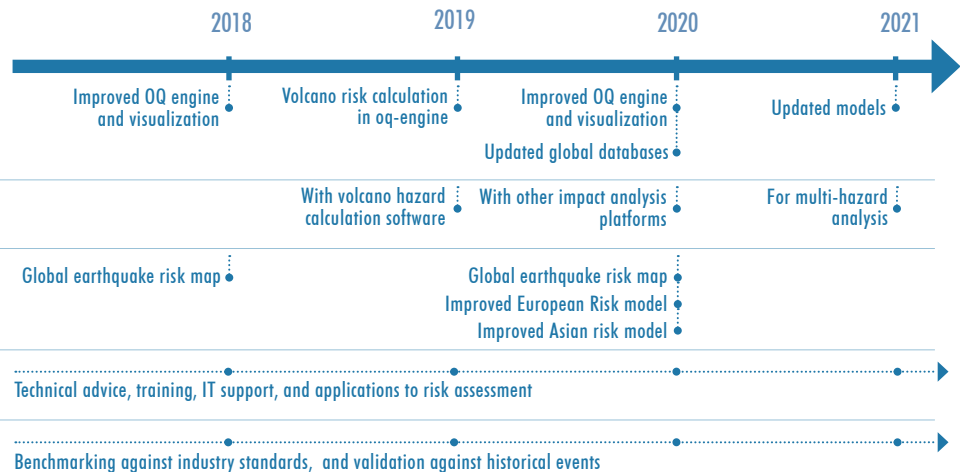

Software, databases and models

Interoperability and integration of models

Hazard and risk modelling

Technical support & bespoke risk assessment

Benchmarking and validation of software and models

Applying science with the risk assessment community

Urban seismic risk and impact assessments for DRR*

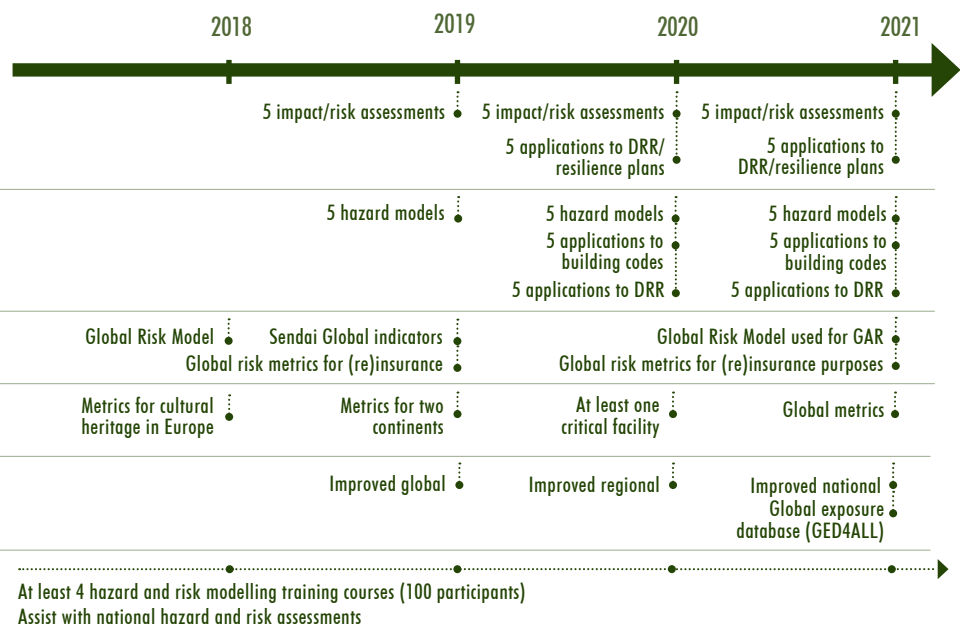

National seismic hazard and risk modelling for DRR

Global seismic risk indicators/metrics

Seismic risk to critical facilities and cultural heritage

Vulnerability and exposure modelling and databases

Capacity Building and Training

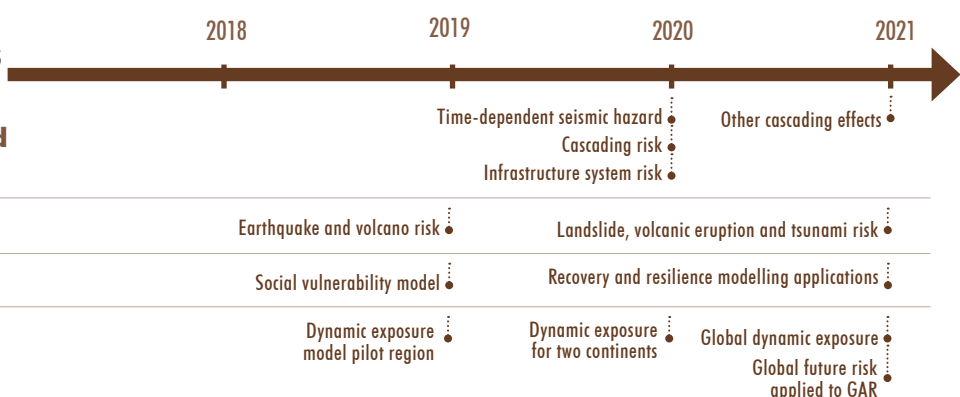

Extending capabilities & approaches into new areas and markets

Next generation earthquake hazard and cascading risk in national hazard/risk

Framework for multi-hazard risk

Recovery and resilience modelling

Dynamic exposure and future risk

HOW TO JOIN

GEM offers flexible mechanisms to enable potential partners to contribute to its ongoing and future work programs. Partners and collaborators may enter into sponsorships, project partnerships and service agreements, and may select the level of engagement based on their needs and requirements.

(<https://www.globalquakemodel.org/get-involved>)

GEM's sponsorship structure and fees have been designed to incentivize participation of public and private organizations. Public Governors may propose to contribute directly to the work program via an in-kind project to offset the *GERD-based sponsorship contribution.

Sponsor Types and Contributions (2020 onwards)

Sponsor Type	Minimum Contribution (k EUR)	Voting Rights	Attends GB Meetings & Events
Public Governor	See GERD	Yes	Yes
Governor	100	Yes	Yes
Advisor	75	No	Yes
Patron	30	No	No

Contribution Levels based on GERD

*Gross Domestic Expenditure on Research and Development (GERD) (current PPP \$)	Annual GEM contribution (euro)
GERD > \$50,000 million	275,000
\$50,000 m > GERD > \$25,000 m	170,000
\$25,000 m > GERD > \$10,000 m	100,000
\$10,000 m > GERD > \$2,000 m	70,000
\$2,000 m > GERD > \$1,000 m	30,000
GERD < \$1,000 m	15,000

*Public Governor minimum contribution levels based on GERD

JOIN US

GEM has implemented a framework for developing and sharing information and tools for analyzing earthquake hazard and risk, and a collective ownership of the process, which has resulted in a common understanding of the risk and a will to act on it.

Though GEM products are important and play an important role in risk reduction, they do not possess the power to further advance GEM's vision. That power lies in GEM's motivation and commitment to serve the public good in a collaborative, inclusive, credible and transparent way.

Join us now in promoting open data and tools and support risk information sharing on publicly accessible platforms.
